PROFESSIONAL SUMMARY

Entry-Level Security Analyst and Cybersecurity Practitioner with hands-on experience across offensive and defensive security domains, developed through 180+ structured labs on TryHackMe. Proficient in web application penetration testing, network security monitoring, SOC operations, alert triage, and security automation. Brings an attacker-first mindset to defensive engineering — leveraging knowledge of exploitation techniques to build more effective detection rules, triage workflows, and security tooling. Actively seeking an entry-level internship in Security Operations (SOC), Penetration Testing, or DevSecOps.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science and Engineering

2024 – 2028 (Expected)

Bipin Tripathi Kumaon Institute of Technology (BTKIT), Uttarakhand

Currently: 2nd Year | Relevant Coursework: Cyber Security, Java, Computer Organization & Architecture, Advanced Applied Mathematics, FLAT

TECHNICAL SKILLS

Languages: Python, Bash, PowerShell, Java (OOP, Multithreading), SQL, C, C++

Offensive Security: Web Application Testing (Burp Suite, SQLMap, Gobuster), Network Reconnaissance (Nmap), Vulnerability Assessment, Exploitation (Metasploit, Msfvenom), Privilege Escalation (Linux/Windows), Brute Force (Hydra), JWT/OAuth Attacks

Defensive / SOC: Log Analysis (auth.log, Splunk, Elastic Stack), Alert Triage, False Positive Analysis, Threat Intelligence (AbuseIPDB, VirusTotal), Threat Hunting, IDS/IPS (Snort), EDR, SOAR, Incident Response, Security Incident Investigation

Network Security: Packet Analysis (Wireshark, NetworkMiner), TCP/IP, Network Protocols, MITM & ARP Detection, DNS/ICMP Tunneling Detection, Data Exfiltration Detection, Firewall Concepts, VPN (OpenVPN)

Frameworks: MITRE ATT&CK, Cyber Kill Chain, Unified Kill Chain, Pyramid of Pain, OWASP Top 10

Tools & Platforms: Kali Linux, Linux, Git & GitHub, Obsidian, CyberChef, Regex, IOC Analysis

PROJECTS

SOC Log Analyzer & Threat Intelligence Automator | Python · Regex · AbuseIPDB API · Bash · Git

github.com/EthRahul/SOC-Log-Analyzer

- Engineered a CLI security tool in Python to automate ingestion and parsing of unstructured Linux authentication logs (auth.log), capable of processing 10,000+ log lines per run, targeting SSH brute-force and credential-stuffing attack patterns.
- Designed Regular Expressions to isolate malicious patterns, successfully identifying and extracting unique attacker IPv4 addresses from large log files, reducing manual log review time by approximately 70%.
- Integrated AbuseIPDB API to dynamically enrich extracted attacker IPs with live threat intelligence — abuse confidence scores, ISP, country, and total report counts — flagging IPs above configurable risk thresholds.
- Automated dual-format incident reporting: SIEM-ingestible CSV files and analyst-friendly Markdown tables with colour-coded risk markers (critical/medium/low), cutting alert triage and reporting time significantly.

- Implemented resilience features including graceful offline Demo Mode (--mock flag), API rate-limit handling, configurable request delays, and custom exception handling for network/API failures.
- Managed secrets securely via .env file — no hardcoded API keys; repository safe for public distribution.

Penetration Testing & SOC Methodology Documentation | Markdown, Git, Obsidian

github.com/EthRahul/thm-journey

- Maintained a structured, version-controlled repository documenting penetration testing methodologies, defensive strategies, and hands-on lab simulations across 5 TryHackMe learning paths.
- Authored detailed room notes covering Web Application Pentesting (authentication attacks, JWT/OAuth, upload vulnerabilities), SOC Level 1 (SIEM, EDR, SOAR, Wireshark, NetworkMiner, MITRE ATT&CK), AI/ML Security, and Networking fundamentals (NetworkChuck series).
- Produced structured challenge writeups for CTF-style rooms including Net Sec Challenge, Vulnerability Capstone, Linux PrivEsc Capstone, Blue, and Metasploit Introduction — documenting full methodology from enumeration to exploitation.
- Notes follow a consistent revision-focused format with tool syntax references, Wireshark filter tables, attack pattern comparisons, and plain-English summaries — designed for both personal revision and portfolio demonstration.

CERTIFICATIONS & COMPLETED LEARNING PATHS

Jr. Penetration Tester Path (56 labs) TryHackMe	April 2026
Cyber Security 101 Path (56 labs, 45+ hrs) TryHackMe	March 2026
Web Application Pentesting Path TryHackMe	May 2026
SOC Level 1 Path TryHackMe	June 2026
AI/ML Security Fundamentals [Pursuing] TryHackMe	In Progress
DevSecOps Path [Pursuing] TryHackMe	In Progress
Ethical Hacking Essentials (EHE) EC-Council	2025
Google Cybersecurity Professional Certificate Google / Coursera	2025

AREAS OF INTEREST

Security Operations (SOC), Network Security Monitoring, DevSecOps, Offensive Security and Penetration Testing, AI/ML Security, Threat Hunting, Security Tool Development
